+1 (636) 368-8679 | [linkedin.com/in/rishika-gade](https://www.linkedin.com/in/rishika-gade) | rishikagade01@gmail.com

Data/Business Analyst who turns data into decisions through ML models, BI dashboards, and automated pipelines. M.Sc. in Business Administration graduate at Virginia Tech with client-facing experience in financial services and consumer insights, known for connecting technical analysis to executive-ready storytelling.

EDUCATION

- M.S. in Business Administration with focus in Global Business Analytics | CGPA - 3.9 / 4.0** [May 2026]
Virginia Polytechnic Institute and State University - Pamplin College of Business, Blacksburg, VA, USA
- B.S. in Business Information Technology, Cybersecurity Management and Analytics | CGPA - 3.88 / 4.0** [May 2025]
Virginia Polytechnic Institute and State University - Pamplin College of Business, Blacksburg, VA, USA
- B.S. in Computer Science Engineering with focus in Data Science** [May 2025]
Narsee Monjee Institute of Management Studies (NMIMS), Mumbai, Maharashtra, India

SKILLS

Analytics & Visualization: Python (Pandas, Scikit-learn, SHAP), SQL, R, JMP, Tableau, Power BI, Excel (advanced)
Statistics & ML: PCA, Clustering, Classification Models, Regression Analysis, Model Evaluation, Text Analysis, Financial Modeling
Data Engineering & Tools: REST APIs, MongoDB, Power Automate, Power Apps, Docker, SAS Viya
AI: Generative Tools (Claude, ChatGPT), AI-Assisted Development (Claude Code, OpenAI Codex, Kiro), Prompt Engineering

PROFESSIONAL EXPERIENCE

- Teaching Assistant | Pamplin Engage TA Program** [Jan 2026 - May 2026]
 - Facilitated learning for **90+ students** across Leadership Skills and Strategic Management through curriculum development, instructional tool design, and assessment.
- MLOps Intern | iDigiCloud Technologies** [June 2025 - Sept 2025]
 - Built a credit-risk classification model (**Decision Tree, AUC: 0.85**) processing **20,000+ loan records**, designed for deployment with a bank's risk audit team to automate approval decisions.
 - Integrated Evidently-AI, SHAP, and DiCE to deliver model monitoring and explainability, translating complex ML outputs into audit-ready findings for non-technical risk stakeholders.
 - Engineered a bidirectional REST API pipeline connecting MongoDB to the client interface, enabling **real-time data flow** for model inference across the full 20K-record dataset.
- IT Intern | L&T Realty** [May 2023 - July 2023]
 - Built a Power BI dashboard consolidating sales call data for a 30+ person sales team at a major real estate firm, replacing a manual Excel process estimated to save **8–10 hours of monthly consolidation**.
 - Developed custom Power Automate API connectors and trained an AI model to extract and digitize **20–30 property invoices** per month from unstructured documents, automating the PR-PO tracking workflow.
 - Conducted RPA performance benchmarking using Power Query and Excel, presenting automation efficiency findings directly to executive leadership to build the business case for wider automation adoption.

KEY PROJECTS

- Green Chef (HelloFresh) - MSBA Business Analytics Capstone** [Spring 2026]
 - Analyzed **37,000+ Green Chef customer records** (reviews + pause and cancellation data) to identify churn drivers, finding negative sentiment correlated with cancellations at $p = 0.555$ and pause rates **7× higher** than cancel rates.
 - Designed GreenSense, a three-module retention intelligence platform, and presented proactive churn recommendations directly to Green Chef's Product Manager and Commercial Strategy leadership.
- AI + NFC Smart Check-In Kiosk — CodeFest Hackathon, Marriott International** [Fall 2025]
 - Awarded **Honorary Mention** at CodeFest (Marriott International) for an AI + NFC smart hotel check-in kiosk, cutting simulated check-in time from **7 minutes to under 30 seconds** using React, face-api.js biometric verification, and a full enterprise architecture proposal.
- Reducing Risk and Maximizing Revenue in Loan Approvals** [Spring 2025]
 - Built an end-to-end credit risk framework in JMP across **2,469 loan applicants**, applying PCA, hierarchical and k-means clustering, and four classification models (Logistic Regression, Neural Network, SVM, Stacking Ensemble), achieving a validation **AUC of 0.894**.
 - Identified high-risk borrower segments using unsupervised clustering and validated model performance via ROC and Lift Curve analysis, presented findings to a class of peers as a formal academic deliverable.
